## SI-TEX LAUNCHES NEW HDK-1000 HIGH PERFORMANCE COMPASS/GPS

### Professional Grade Position, Heading, Speed and Other Critical Data Enhances Performance of Autopilots, Chartplotters, Radar and More

SI-TEX Marine Electronics has added the new HDK-1000 to its 2017 product lineup. This high-performance Compass/GPS is designed to provide state-of-the-art position, heading, speed and other critical data to enhance the performance of a wide range of onboard electronics, including autopilots, chartplotters, radar, scanning sonar and other important systems.

The professional grade HDK-1000 has no moving parts and uses 12 precision internal sensors (including magnetometers, gyros, accelerometers, GNSS, barometer and thermometer) to output critical data such as true heading, magnetic heading, deviation, variation, roll, pitch, position, satellite information, ground speed, course over ground, time/date, air pressure and temperature in real time over NMEA2000 or NMEA0183 connections. Delivering this sort of information accurately, precisely and instantly is key to optimizing the performance of a range of onboard systems — especially as cruisers, sportfishing yachts and workboats become increasingly reliant on high technology.

The HDK-1000 can be installed on fiberglass, aluminum or even steel-hulled vessels and comes standard with a pole-mount base, as well as an under-deck mounting kit (the HDK-1000 can be mounted in various below decks locations on fiberglass boats and still operate reliably).

Like every product from SI-TEX Marine Electronics, the new HDK-1000 is backed by the company's Two-Year Warranty and easily accessible Long Island, New York-based service department. For more information, contact SI-TEX Marine Electronics at (631) 996-2690 or visit online website at [www.si-tex.com](http://www.si-tex.com).

HDK-1000 MSRP: \$849
