SI-TEX ADDS NEW MDA-4 VHF/DSC/AIS TO POPULAR METADATA SERIES

Advanced Marine Radiotelephone Combines Professional-Grade Features, 25W Hailer/Foghorn and Built-In AIS

SI-TEX Marine Electronics has added a new product to its popular Metadata Series of advanced AIS products for boaters — the new-for-2017 SI-TEX MDA-4. This advanced VHF-FM/DSC marine radiotelephone provides mariners with professional-grade communications features and the added safety and convenience of a built-in Class B AIS transceiver.

Ruggedly built to withstand the harsh marine environment, the MDA-4 is an ideal choice for both recreational and light commercial vessels. Designed for easy integration with chartplotters, radar and other onboard systems using NMEA2000 or NMEA0183 connections, the MDA-4 is an integral component for any modern helm station.

This DSC radio provides clear, reliable communications, even in the most challenging conditions. The MDA-4's robust design includes a large dot-matrix LCD display, easy-to-use rotary menu control and built-in 25W loud hailer/foghorn for added safety in emergency situations. An optional second-station mic kit provides for flexible installation and easy use on a wide variety of vessels.

This advanced radio completes SI-TEX's popular Metadata AIS product family that includes the MDA-1 Class B AIS Transceiver, MDA-2 Dual Channel AIS Receiver, and MDA-3 AIS Antenna Splitter.

Like every product from SI-TEX Marine Electronics, the new MDA-4 is backed by the company's Two-Year Warranty and easily accessible Long Island, New York-based service department. For more information, contact SI-TEX Marine Electronics at (631) 996-2690 or visit online website at www.si-tex.com.

Note: 2017 On Sale Date Pending FCC Type Acceptance
