## SI-TEX INTRODUCES NEW COMPACT CHARTPLOTTER AND CHART/SOUNDER SYSTEMS

### *SI-TEX SVS-460 and SVS-560 Bring Robust Reliability and Advanced Performance to Any Vessel*

SI-TEX Marine Electronics has introduced two new Chartplotter and Chartplotter/Sounder systems as early additions to its 2015 product line up.

Available now, the compact new SVS-460 and SVS-560 provide boats of any size with the professional-grade reliability

SI-TEX is known for, along with some truly unique features for units in this size and price range.

The SVS-460 Chartplotter and SVS-560 Chartplotter/Echosounder feature 52-channel GPS receivers for reliable and accurate positioning, with the ability to operate using either C-MAP or Navionics cartography. No special set-ups or dedicated software are required to switch between the two chart systems. Both units include built-in internal GPS antennas for easy installation, and also provide easy-to-connect external GPS antenna options. Both of these new systems are designed for global operation, operating not only with the U.S. GPS Satellite System, but also the European Galileo System, the Russian Glonass System and Asian QZSS Satellite System.

The SVS-460 Chartplotter features a high-resolution 4.3-inch color LCD display with a high intensity LED backlight for excellent daylight viewability on open boats. The SVS-560 Chartplotter/Echosounder features a 5-inch color LCD with extra-bright LED backlighting, and comes standard with a built-in 600W dual-frequency digital sounder. It offers all the professional sounding features expected from a SI-TEX unit, including Auto/Manual Gain, Range and Shift, White/Black Line, Bottom Lock, Bottom Zoom, A-Scope, three level Interference Rejection and four level Noise Rejection.

Both units provide advanced navigation and charting capabilities, including storage for 20,000 waypoints, 50,000 trackpoints and 100 routes of up to 20 waypoints each. The SVS-460 and SVS-560 offer four chart display modes, including True Motion, N/S/E/W Up, Course Up and Head Up. A range of audible alarms are available to aid safe navigation and boating, including Arrival, Anchor, Cross Track Error (XTE), Interval Timer and User Line.

In the SI-TEX tradition, these new systems are engineered for ease of operation. A combination of function keys and a multidirectional control provides fast access to menus, pre-set pages and all system charting and/or echosounding functions. Both systems utilize NMEA 0183 data input/output for easy integration with existing electronics systems on light commercial and recreational fishing boats.

Both the SVS-460 and SVS-560 are backed by SI-TEX's two-year Limited Warranty and supported by SI-TEX's Long Island, New York-based service department. The SVS-460 carries an affordable MSRP of \$459.00, while the SVS-560 retails for only \$699.

For more information on the new SI-TEX SVS-460 and SVS-560 charting/fishfinding systems — or the company's full line of marine electronics for recreational and commercial vessels — contact SI-TEX Marine Electronics at (631) 996-2690 or visit the online at [www.si-tex.com](http://www.si-tex.com).
